                                                                                           A DNA molecule (AAT69201) codes for the GroEL heat shock protein (AAM16678) of Lawsonia intracellularis, the causative agent of porcine proliferative enteropathy (PPE). A genomic library was prepd. from L. intracellularis PPE lesion isolates and screened with rabbit anti-L. intracellularis antiserum. Phagemid DNA was isolated from individual clones and sequenced. GroEL and GroES (see also AAT69202)

                                                                                                                                                                    individual clones and sequenced. GroEL and GroES (see also AAT69202 sequences were identified and another 13 clones were subsequently (AAT69203-15) isolated. These nucleic acids can be used to produce recombinant polypeptides useful in vaccines against intestinal diseases such as PPE, including recombinant vaccines utilising bacterial, fungal or viral vectors. They can also be used as genetic vaccines and in diagnostic assays.
             Vaccine for treating or preventing Lawsonia intracellularis infection - especially in pigs, containing non-pathogenic form of bacterium or its components
                                                                                                                                                                                                                                                                                                                     DB 18; Length 1647;

                                                                                                                                                                                                                                                                                                                   DNA molecules (AAT69203-15) were isolated from an immunoscreening of a Lawsonia intracellularis library using experimental sera from vaccinated pigs. These nucleic acids, as well as isolated GroEL and GroES (AAT69201-02) sequences, encode putative vaccine candidates (see also AAW16678-85) useful for protection of animals and birds against intestinal diseases, esp. protection of pigs against porcine proliferative enteropathy (PPE). They can also be used as

The invention relates to a protein (ABP25413-ABP30895) from group B streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus progenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71256 and antibaches that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to detect Streptococcus in a biological sample. (I) are used to detect Streptococcus in a biological sample. (I) are used to detect Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity concerns the concerns of the composition (I) are used for affinity concerns the concerns of the composition of

streptococcus/GBS (Streptococcus agalactiae) or group A streptococcus/GBS (Streptococcus/GBS (Streptococcus/GBS), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiminfammatory activity. (I), nucleic acids encoding (I), ABN66044-ABN71526 and antiboddes that bind (I) are used in the manufacture of medicaments for antiboddes that bind (I) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding (I) are used to detect Streptococcus in a biological sample. (I) is used to detect Streptococcus in a compound binds to (I). A composition comprising (I) or a nucleic acid encoding (I), may be used to recombinantly produce (I), may be used to recombinantly produce (I) and may be used in gene therapy. Antibodies to (I) are used for affinity chroming produce (I) and may be chromatography, immunoassays, and distinguishing/identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ciditicadcadcagricaadadcitaaaadadatigcacaaccagritcadgcaaadaad 2023846

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             367
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        127
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                247
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a Moraxella catarrhalis genomic library comprising of a combination of 41 nucleic acid molecules (see AAP28514-AAP28554). The library has a number of uses described in the specification e.g. is useful for aidentifying diagnostic and therapeutic compositions. M. catarrhalis (Branhamella catarrhalis) is a large aerobic, gram-negative diplococcus, normally found among the bacterial flora of human upper airways. M. catarrhalis is known to cause acute, localised infections such as ottics media, sinustits and bronchopulmonary infection and life-threatening, systemic diseases including endocarditis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          427

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to nucleic acid sequences (ABQ67188-ABQ71212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to screen for compounds that modulate gene expression, replication

                                                                                                                                                                                                                                                                                                63
and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to screen for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for treating infections by Listeria, and are useful as immunogens in anti-listeria vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       TAAACCGTCCACTCCTTATTATTGCTGAAGGTGAAGGTGAAGCACTTGCAACACTTG

                                                                                                                                                                                                                                                                                        (ABQ67188-ABO71212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to screen for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for treating infections by Listeria, and are useful as immunogens in anti-Listeria vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8 CTAAAGAAATCCTTTTTGATGCTAAAGCCCGTGAAAAACTTTCACGAGGTGTAGATAAAC 67

Dehoux P; Cossart P; Genomic sequence for Listeria monocytogenes, useful e.g. for treatment and prevention of Listeria and related bacterial infections, and related polypeptides Buchrieser C, Frangeul L, Couve E, Rusniok C, Fsihi H, Dehoux P; Dussurget O, Chetouani F, Nedjari H, Glaser P, Kunst F, Cossart F Daniels J, Goebel W, Kreft J, Kuhn M, Ng E, Vazquez-Boland JA; Dominguez-Bernal G, Garrido-Garcia P, Tierrez-Martinez A, Amend A; Chakraborty T, Domann B, Hain T, Berche P, Charbit A, Durant L; Perez-Diaz J, Baquero F, Garcia Del Portillo F, Gomez-Lopez N; Maduenio E, De Pablos B, Wehland J, Kaerst U, Entian K, Hauf J; Claim 1; SEQ ID No 1; 192pp; French.

The present sequence is the genome sequence of Listeria monocytogenes BGD-e. This sequence and fragments of this sequence are useful for selecting probes and primers for detecting genes in L. monocytogenes and related organisms, and to study genetic polymorphisms and other genomes. Proteins (ABB47297-ABBS0149) expressed from the present sequence are useful for raising specific antibodies, identification of L. monocytogenes and related organisms, and for biosynthesis and biodegradation, especially biosynthesis of Vitamin B12. This sequence and proteins encoded by it are also useful for selecting compounds that regulate gene expression and cell replication and modulate L. monocytogenes-related diseases. In addition, this sequence and proteins encoded by it are useful in pharmaceutical and vaccines compositions for the treatment or prevention of infections by L. monocytogenes and related Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                    Haemophilus influenzae strain Rd. The invention relates to a computer readable medium (CRM) having recorded upon it the complete H.influenzae nucleotide sequence (I), a representative fragment of (I) or a nucleotide sequence at least 98 identical to (I). By providing the full-length genomic sequence in a computer readable form, it is possible to identify commercially important nucleic acid fragments and expression modulating fragments (EMFs) of the Haemophilus genome. The EMFs can be used to regulate the expression of a nucleic acid molecule. Vectors and altered

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (Note: Revised entry submitted to correct the patent number format of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                  The sequence was obtd. from clone pGP57 isolated from a DNA library prepd. from C. psittaci genomic DNA. The two ORFs encode HypA and HypB hypersensitivity proteins, regulated by a heat shock type promoter region. The DNA can be used to produce recombinant pronceins or to design probes for the detection of Chlamydial infection. The Hyp proteins can be used to to raise antibodies and in vaccines. The Hyp B protein elicits a cell-mediated immune response so can be used as a skin test antigen.
DNA encoding HypA and HypB Chlamydia proteins - used to develop prods. for detection of and vaccines against Chlamydia infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     43.3%; Score 713.6; DB 12; Length 2465; 66.0%; Pred.                                                                                                                                                                                                                                      The sequence was obtd, from clone pTA571 isolated from a DNA library prepd. from C. trachomatis genomic DNA. The two ORFs encode HypA and HypB hypersensitivity proteins. The DNA can be used to produce recombinant proteins or to design probes for the detection of Chlamydial infection. The Hyp proteins can be used to to raise antibodies and in vaccines. The Hyp B protein elicits a cellmediated immune response so can be used as a skin test antigen.

The present invention describes a gene (I) derived from Buchnera sp. containing the DNA (a) or (b), (a) has a fully defined base pair sequence selected from a table of sequences found in the Buchnera sp. genomic DNA of ABA92787 given in the specification or is a DNA selected from complementary DNA sequences, and (b) is a DNA which hybridises with the DNA (a) and encodes a protein. Also described are: (1) a recombinant vector (II) containing (I); (2) a transformant (III) containing (II); (3) a genomic DNA of Buchnera sp. containing the sequence given in ABA92789; (4) a plasmid derived from Buchnera sp. containing DNA (c) or (d), (c) is a DNA containing a fully defined sequence given in ABA92789 ond (d) is a plasmid which hybridises with a DNA; and (5) a method for the preparation of a protein in which (III) is cultured and the expression protein of a protein in which (III) is cultured and resultant culture. The DNA is useful for developing agricultural chemicals for exterminating cockroaches. The present sequence represents the present sequence from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .8955 GCAAACGATGCAGCAGGTGATGGTACCACAACAGCAACATTATTAGCACAATCTATAGTA 19014

The nucleic acid sequence is useful in the detection and/or amplification of nucleic acid sequence, particularly to identify Lactococcus lactis or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Note: The sequence data for this patent is based on equivalent patent WO200177334 (published 18-OCT-2001) which is available in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Seguence 2365589 BP; 765914 A; 415261 C; 420487 G; 763927 T; 0 other;

  fused antigen. Also, where used for cancer control, they lack the side effects associated with endotoxins. They can also be used to detect specific antibodies and in treatment or prevention of tumours (e.g. sarcoma or cancers of breast, overy, prostate, lung, pancreas or liver). The Hsp60 polynucleotide is used for recombinant production of the protein, as a source of primers and probes for detecting streptococci in standard hybridization/amplification assays, and therapeutically in gene therapy vectors.
                                                                                                                                                                                                                                                                                                                                                    CAAAAGAAATCAAATTTTCAGCAGATGCGCGTGCTGCCATGGTGCGCGGAGTTGATATGT

The protein, its fragments, variants and fusion proteins, are used to elicit or enhance an immune response against Streptococcus, and to elicit a similar response to a target antigen fused to the protein. Unlike other immunological carriers, Hsp60 proteins are not immunosuppressive so provide an increased response to any conjugated o
